

# Resources & Scope

Everything built so far, in one view — the Concept Library organized by cluster, the teaching unit and lab in teaching order, and where the course fits a school's existing slots.

TEACHER GUIDES

## 01 The Concept Library

Standalone economic-literacy primers (~5 pages each, same template). A teacher pulls one in whenever a lesson needs the underlying idea. Each teaches the tool, then breaks its neutrality across real contexts. Self-contained; no prerequisites.

### ALLOCATION

#### Scarcity

Limited means against unlimited wants — the starting condition of all economics.

#### Opportunity Cost

The real cost of any choice is the best thing given up to make it.

#### Incentives

People respond to rewards and penalties — often in unintended ways.

### ENGINES

#### Profit Motive

The drive for gain as the engine that organizes production.

#### Compounding

Growth on growth — the quiet force behind both wealth and debt.

#### Competition

Rivalry that disciplines price and quality — until it doesn't.

#### Productivity <sup>New</sup>

More output per hour — the engine of living standards, and the question of who gets the gains.

#### Creative Destruction <sup>New</sup>

The new rises by destroying the old — growth and disruption as one motion.

## POWER

### Monopoly

One seller, no rivals — pricing power and its costs.

### Network Effects

Value that grows with users — and tips markets toward a single winner.

### Economies of Scale

Cheaper per unit as you grow bigger — an advantage that compounds.

### Rent-Seeking

Getting rich by capturing value rather than creating it.

### Sovereignty <sup>New</sup>

Control over your own economic fate — and the leverage dependence hands to others. Person to nation.

### The Trust <sup>New</sup>

A structure that splits control from benefit — protective for a child, dynastic for a fortune.

## DISTRIBUTION

### The Commons <sup>New</sup>

Resources owned by no one and used by all — ruined without rules, governable with them.

## MONEY & VALUE

### Ownership & Equity

What it means to own a share of something, and why it matters.

### Inflation

A general rise in prices — and the silent redistribution it performs.

### Wages & Assets

Income from work versus income from what you own.  
(Reader-prefixed; functions as a primer.)

### The Wealth of Nations

The US vs. world private-wealth-creation engine.

### The Wealth of the Nation

The internal breakdown — distribution data, no moralizing.

### Data <sup>New</sup>

The strange new asset — worthless alone, immense in bulk, generated by the people who rarely own it.

### Cryptocurrency <sup>New</sup>

Money without a state behind it — and the question of what makes anything money at all.

### The Corporation <sup>New</sup>

The legal "person" — limited liability, and the buried question of who a company is for.

### P&L vs. Balance Sheet <sup>New</sup>

Flow vs. stock — "are you making money?" against "what are you worth?" Paycheck to national debt.

### Credit <sup>New</sup>

Spending the future on a promise — and the trust that decides who gets to.

### Debt <sup>New</sup>

A fixed, enforceable obligation — risk shifted to the borrower, power handed to the lender.

## 02 Teaching Unit — Human Flourishing

---

A full unit, "Human Flourishing in the Age of Platforms, Automation, and Exponential Growth," in teaching order. Pull Concept Library primers alongside the movements as the underlying ideas come up.

|          |                                                                                                                                                          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Guide    | <b>Teacher Guide — Human Flourishing</b><br>Unit overview, framing, pacing, and paired-resource guidance for the whole arc.                              |
| On-Ramp  | <b>On-Ramp Reader</b><br>Sets the central question of flourishing and the two analytical tools (individual agency, public capacity).                     |
| Support  | <b>What Is a Platform? • Wages &amp; Assets</b><br>Two supporting readers that supply ideas the movements lean on.                                       |
| Mvt. I   | <b>Movement I — Platforms</b><br>How platforms reshape work, value, and power. <i>Pairs with: Network Effects, Data, Monopoly.</i>                       |
| Mvt. II  | <b>Movement II — Automation</b><br>Machines, labor, and displacement. <i>Pairs with: Creative Destruction, Productivity.</i>                             |
| Mvt. III | <b>Movement III — Wealth</b><br>Concentration, ownership, and distribution. <i>Pairs with: Ownership &amp; Equity, the Wealth primers, Rent-Seeking.</i> |
| Capstone | <b>Capstone — Define &amp; Defend</b><br>Students define flourishing on their own terms and defend a reform stance.                                      |

## 03 Role-Play Lab — The Data Center Decision

---

A simulation/deliberation lab where students negotiate a real economic-civic decision. One of the evidence-favored pedagogies (role-play, structured discussion).

|         |                                                                                                                                      |
|---------|--------------------------------------------------------------------------------------------------------------------------------------|
| Student | <b>Civic Economy Role-Play Lab — Student Lab</b><br>Roles, briefing materials, and the deliberation structure students work through. |
| Teacher | <b>Civic Economy Role-Play Lab — Teacher Guide</b><br>Facilitation, timing, debrief prompts, and assessment guidance.                |

## 04 Framework & Front Matter

*The documents that establish the course's rationale, sequence, and intellectual scaffolding.*

|                                                                                                                    |                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Framework &amp; Rationale</b><br>The pedagogical spine: how to think, embrace before critique, the reform test. | <b>Two-Year Sequence</b><br>The longer course map this resource page complements.                            |
| <b>Civic Education — Introduction</b><br>Framing for the civic dimension of the course.                            | <b>Core Anthology 250</b><br>Anthology, introduction/argument, and teacher guide — the 250-voice reader set. |
| <b>Revolution, Counterrevolution, Reform</b><br>Reader and teacher guide on the arc of economic change.            | <b>About / Architect</b><br>The course's origin and design statement.                                        |

## 05 Where It Fits a School's Schedule

*The three openings where a semester Economic Democracy course is most plausible. The materials above are designed to be standards-completing, not standards-rejecting.*

### A senior Economics course

The Concept Library supplies the conceptual-economics backbone; the unit and lab supply the inquiry, simulation, and performance tasks that a textbook can't.

### A combined Government / Economics graduation slot

The power/institutions/ownership framing unifies what Gov and Econ usually teach as adjacent subjects.

### An interdisciplinary social-studies elective

Contemporary relevance — platforms, automation, data, AI — inside a durable structural frame.
